

Environmental Management Training

Statement of Qualifications

Business Description

Environmental Management Training (EMT) offers professional OSHA and EPA compliance training, environmental consulting, bio-decontamination, light construction and construction management services in the Puget Sound Region. We have extensive experience in virtually every aspect of environmental investigation and environmental contracting in support of the real estate community, lending industries, property development companies and general contractors.

Training Innovation

EMT specializes in environmental compliance training for workers. The first line of defense from potential environmental risk is worker training. That is why EMT provides all of today's training needs for small and large businesses, as well as numerous time-orientated lectures for clients on specific and general environmental issues and concerns. Courses we provide include HAZWOPER, Lead, EPA RRP, Asbestos Worker and Supervisor, Confined Space, Microbial/Mold and others by request. EMT has the most realistic hands-on training in the industry, giving clients confidence and a sense of security when they work on actual hazmat sites.

Consulting and Contracting Highlights

- UST decommissioning and replacement for JBLM and Tacoma Narrows Airport
- City of Tacoma police fleet decontamination
- Hurricane Katrina relief worker training in New Orleans
- Several abatement projects throughout the Tacoma Metropolitan Area
- Emergency spill response for Sound Transit and the University of Puget Sound
- EPA Brownfields Job Trainings
- Mecca Theater asbestos abatement and demolition, and Luzon Building lead abatement, demolition and salvage
- HAZWOPER training provider for Alaskan Way Viaduct Replacement Project

Company Strengths/Competitive Edge

EMT is small, efficient and willing to go wherever our clients are located to meet their training and consulting needs. Most important, we know that thoroughly understanding environmental regulations can never be underestimated. EMT continually monitors changes in local, state and federal regulatory agencies and their environmental policies. Passing this information on to our clients is imperative. Our overall knowledge of environmental laws allows us to educate clients about the expectations and long-term concerns of their specific issue, and its relevance to other parties involved. There is no higher priority than providing accurate information to our clients, and meeting their needs within budget and on time.

Goals

We aim to become the premier environmental compliance provider in the Puget Sound region, and a regionally-respected consultant.
